## Today's Topics

1. What is DNF? 2. DNF vs YUM 3. DNF vs PackageKit 4. Plugins a.dnf-plugins-core b.dnf-plugins-extras 5. What's next?

## What is DNF?

## What it is

• Package manager with number of features:

- Fast (using fast C libraries, like libsolv)
- Well documented
- Not confusing people

#### What it can

#### • dnf:

- Install/Erase/Upgrade/Search packages
- Plugins:
  - Install builddeps, debuginfo and more
- dnf-automatic:
  - Check/Install/Download all/security updates
  - Report results via Email/Motd/Stdio

## DNF vs YUM

#### Differences

- No --skip-broken
- clean\_requirements\_on\_remove on by default
- More faster
- Automatic making cache
- More cool plugins

## DNF vs PackageKit

#### Differences

- admins hate packagekit
- users hate dnf
- PackageKit can run > 1 transaction at time
- DNF has easy-pluggable system
- PackageKit has D-Bus interface
- DNF can automate things (dnf-automatic)

Plugins

## What plugins can do

 Run any commands on any of dnf CLI stage (config, resolved, sack, transaction)

Add new commands and provide cool features

## dnf-plugins-core

- For basic features
- Implemented:
  - debuginfo-install (eq: debuginfo-install)
  - repoquery (eq: repoquery)
  - download (equal: yumdownloader)
  - copr
  - needs\_restarting
    - reposync
  - And much more

## dnf-plugins-extras

- For any community plugins
- Implemented:
  - snapper

## Why it is better

- We don't need write the same code for each plugin
- YUM vs DNF codelines (w/o comments):
  - 1286 vs 214 (repoquery)
  - 171 vs 73 (builddep)

What's next?

## Our plans

- Fix bugs
- Implement RFEs (for example, rpmconf plugin)
  Get more developers (0.6.2->0.6.3 9 persons)
  Happy to review/merge Pull Requests
  Set as default package manager in Fedora 22!
